Printing authorized by Section 11(a)3 of Title 35, U.S. Code P.O.

PATENT OFFICE NOTICES

Trademark Office Actions

Effective Apr. 1, 1972, trademark applicants or their attorneys will be provided with only one carbon copy of any office action, and the mailing of an additional carbon copy will be discontinued.

This change is consistent with the current practice in the patent examining operations and should result in greater efficiency in the preparation and mailing of office actions.

ROBERT GOTTSCHALK,
Commissioner of Patents.

Proposed Submission Requirements

Notice is hereby given that, pursuant to the authority contained in section 6 of the Act of July 19, 1952 (66 Stat. 793; 35 U.S.C. 6), the Patent Office proposes to amend Title 37 of the Code of Federal Regulations by revising § 1.52 and by adding a new § 1.58.

All persons are invited to present their views, objections, recommendations, or suggestions in connection with the proposed changes to the Commissioner of Patents, Washington, D.C. 20231, before April 30, 1972. No oral hearing will be held. Any written comments or suggestions may be inspected by any person upon written request a reasonable time after the closing date for submitting comments.

These proposed rule changes are intended to facilitate the examination, microfilming, and printing of patent applications and patents.

When patents are printed, all complex chemical and mathematical formulas and tables appearing in the text must be specially hand set and then inserted into a space left on the composed page. The hand setting is expensive and results in many errors which must later be corrected by Certificates of Correction. The use of submitted camera copy for printing would be inexpensive and error free. Members of both the legal and scientific communities have indicated that errors in printing formulas and tables are a problem.

Under the proposed rules the applicant would furnish a copy of all tables and complex formulas, each having an identifying number, on bristolboard sheets or the like in a form suitable for use as camera copy for printing. The submitted specification would contain at the appropriate location either a copy of the insert plus its identifying number or the identifying number and a blank space. Although the applications would be submitted with the formulas and tables on sheets separate from the specification texts, the patents would continue to be printed with the formulas in the text.

The formulas and tables could be corrected and amended in the same manner as drawings.

The following is an example of how a sheet of inserts might appear.

Section 1.52, if amended as proposed, would require application papers in a form that would permit readily legible reproductions to be made and certified for use in foreign priority filings, court proceedings and 37 CFR 1.60 continuing applications.

The proposed changes are as follows:

1. Section 1.52 is revised to read as follows:

§ 1.52 *Language, paper, writing, margins.*

(a) The specification and oath or declaration must be in the English language. All papers which are to become a part of the permanent records of the Patent Office must be legibly written or printed in permanent ink or its equivalent in quality. All of the application papers must be presented in a form which has sufficient contrast between paper and ink and of sufficient clarity to permit the production of readily legible copies in any number by photography, electrostatic processes, photo offset, and microfilming. Substitute typewritten or printed papers and inserts (see § 1.58) may be required if the papers and inserts originally filed are not of the required quality.

(b) The application papers (specification and claims, oath, declaration, papers as provided for in §§ 1.42, 1.43, 1.47, etc.) and also papers subsequently filed, must be plainly written on but one side of the paper. A wide margin must be reserved on the left-hand side and on the top of each page and the lines must not be crowded too closely together. The size of the sheets of paper should be 8 to 8½ by 12½ to 13 inches (20.3 to 21.6 cm. by 31.8 to 33.0 cm.), or international A4 (21 cm. x 29.7 cm.). Use of typewritten and double spaced lines with margins of 1½ inches on the left-hand side and top is deemed preferable. The pages of the specification, including those containing claims, should be numbered consecutively, starting with 1, the numbers being placed in the center of the bottom margins.

(c) Any interlineation, erasure, or cancellation or other alteration must have been made before the application was signed and sworn to or declaration made, and should be clearly referred to in a marginal note or footnote on the same sheet of paper, dated and initialed or signed by the applicant to indicate such fact. No such alterations are permissible after execution of the application papers. (See § 1.56)

2. A new § 1.58 is added to read as follows:

§ 1.58 *Chemical and mathematical formulas and tables.*

(a) The specification, including the claims, and the abstract may contain chemical and mathematical formulas, but shall not contain drawings or flow diagrams. The description portion of the specification and the abstract may contain tables; a claim may contain tables only if necessary to conform to 35 U.S.C. 112.

(b) In the application specification, one-line formulas composed of normal sized Roman and Greek letters and Arabic numerals with one level of superiors and inferiors may appear in the text. All other tables and chemical and mathematical formulas must be presented separately from the specification on pure white paper as defined in § 1.84(a), for use as camera copy for insertion in the specification when printing any patent which may issue.

(c) The size of the separate insert sheets must be 8½ inches wide (21.6 cm.) by not more than 14 inches (35.6 cm.) or less than 10 inches (25.4 cm.) high. A space of at least 1 inch (2.54 cm.) in height must be left at the top of the sheet (the narrow dimension) for marking and fastening. The sheets may contain holes as defined in § 1.84(b) and identifying indicia as defined in § 1.84(1). Amendments may be made as provided for in § 1.123.

(d) All formulas and tables on the separate insert sheets should be consecutively numbered in the order in which they appear in the specification, and labeled at their upper lefthand corners with the word "Insert" before the number within parentheses (for example, "Insert (3)"). Formulas or tables which are to appear consecutively in a patent may be grouped and designated as a single insert. The location in the originally submitted specification where an insert is to appear in the printed patent should be indicated by a wide space and the appropriate insert designation.

(e) The width of such formulas and tables on the separate insert sheets should be limited normally to 5 inches (12.7 cm.). If it is not possible to limit the width of a formula or table to 5 inches (12.7 cm.), it is permissible to present the formula or table with a maximum width of 10¾ inches (27.3 cm.) and to place it sideways on the insert sheet, if necessary, in which case the insert will appear printed across both columns of the page in the printed patent. The characters used in such formulas and tables must be from a type font having capital letters which are at least 0.086 inches (2.2 mm.) high (elite type). On the separate insert sheets a space at least three-eighths inch (9.5 mm.) high should be provided between the numbered inserts.

(f) In addition to the separate insert sheets, reproduction copies of the formulas and tables may be placed in the specification at the locations where they are to be printed. Such copies should, however, be labeled with an insert designation as provided in paragraph (d) of this section.

§ 1.75 [*Amended*]

3. Section 1.75 is amended by adding at the end of paragraph (d)(1) the expression, "(See § 1.58(a).)"

ROBERT GOTTSCHALK,
Acting Commissioner of Patents.
